

# OCWE 0123 image workflow summary

Artwork added: #123 - b2

Category / label: 30x40 cm

Description: 30x40 cm, acrylic + fuse beads on canvas

## What I did

- Copied the source JPG into art/ocwe0123.jpg and kept it as the archival/source image used by the site repository.
- Read the source image as RGB. Source dimensions: 2252 x 2252 px.
- Generated responsive WebP versions for the existing OCWE web pipeline using Lanczos resizing.
- Added a new gallery item to index.html with data-tag="3040", label "30x40 cm", and the responsive srcset below.
- The 900 px WebP is used for the grid image; the 1600 px WebP is used for the opened modal image.

## Generated files

| Output file                | Pixel size     | Format / quality           |
|----------------------------|----------------|----------------------------|
| art-web/480/ocwe0123.webp  | 480 x 480 px   | WebP, quality 74, method 6 |
| art-web/900/ocwe0123.webp  | 900 x 900 px   | WebP, quality 78, method 6 |
| art-web/1200/ocwe0123.webp | 1200 x 1200 px | WebP, quality 78, method 6 |
| art-web/1600/ocwe0123.webp | 1600 x 1600 px | WebP, quality 82, method 6 |

## Manual recipe

Resize the source proportionally to widths 480, 900, 1200, and 1600 px. Save each as WebP into art-web/[width]/ocwe0123.webp. Use quality 74 for 480, 78 for 900 and 1200, and 82 for 1600. Then add a matching picture/srcset block to index.html.
